

## Help us improve flu vaccination for children

Is your child 2–17 years of age?

We are looking for children to take part in the CHIP (ChildHood Influenza Program) Study, a clinical research study looking at an investigational flu vaccine. More than 2000 children will be taking part.

Your child will need to visit the study center 3–4 times over the course of 6–8 months. Doses of the vaccine will be given by nasal spray (a spray into the nose), not by injection, and a small amount of blood will need to be taken on two occasions to check your child's immune response.

To find out more, please visit [ctxhr.com](http://ctxhr.com) or contact the study team directly:
